DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-19, drawn to a polymer electrolyte membrane fuel cell membrane electrode assembly, classified in class 429, subclass 30.
 - II. Claims 20-36, drawn to an integrated circuit based fuel cell apparatus and an integrated circuit, classified in class 429, subclass 22.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because an integrated circuit does not require a polymer electrolyte membrane fuel cell in order to operate, that is, a circuit per se can be combined with any other device requiring either automatic or mechanical control means. The subcombination has separate utility such as providing a polymer electrolyte assembly to used in a solid electrolyte fuel cell system for generating electrochemical energy.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for one group is not required for other group, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Michael T. Konczal on 01/06/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
